DIRECTIONS FOR USE: use only as directed

SHAKE WELL BEFORE USE AND REPLACE CAP AFTER POURING.

Half-fill the spray tank with water, then pour the required quantity of **FARM-AG AMETRYN 500 SC** into the tank through a sieve. Top up with water. Keep the chemical in continuous suspension by mean of agitation. Flush tank out thoroughly with water after each day's spraying. If **FARM-AG AMETRYN 500 SC** is used in combination with a hormone-type herbicide, first mix the **FARM-AG AMETRYN 500 SC** with water as indicated above, then add the 2,4-D or MCPA to the tank.

APPLICATION:
FARM-AG AMETRYN 500 SC can be applied with any high or medium volume sprayer fitted with efficient agitation. Accurately calibrate spraying equipment prior to application. Use fan or flood jet nozzles to ensure a uniform coverage. Use 200 to 400 l/ha of mixture for overall application.

APPLICATION RATES:

SUGAR CANE
FARM-AG AMETRYN 500 SC may be applied at any development stage of the cane but weeds must be actively growing at not larger than indicated below.

WEEDS OR GRASSES	SOIL TYPES	FARM-AG AMETRYN 500 SC (ℓ / ha)
Mainly broadleaf weeds and annual grasses.	All	8,0
Mainly nutsedge *(C. Esculentus)*	All	3,0ℓ + 3,5ℓ MCPA (400g/ℓ) OR 2,0ℓ 2,4-D (720 g/ℓ)

Notes:
1. The latter treatment will control yellow nutsedge which is fully emerged at the time of spraying for a period of 3 to 6 weeks. The broadleaf weeds listed above and grasses smaller than 4cm will also be controlled. The treatment has a limited residual effect.
2. Sugarcane can be sprayed over the top provided it has not developed beyond the five leaf stage. Beyond this stage the spray must be directed below the canes leaves in such a way as to avoid contact with the cane leaves. Wherever possible preference should be given to a directed spray treatment where **FARM-AG AMETRYN 500 SC** plus MCPA or 2,4-D are used.
3. A non-toxic surfactant should be added to the final spray mixture to increase the efficacy of the treatment.
4. If the mixture stands for any length of time, stir well before commencing spraying again.

BANANAS

FARM-AG AMETRYN 500 SC can be applied during any development stage of the bananas, but care should be taken to ensure that the product is not sprayed directly onto the banana plant. **FARM-AG AMETRYN 500 SC** should be applied in spring or late summer to autumn onto weeds in an active stage of growth, but no larger than indicated above.
